EQ-i 2.0 Model of Emotional Intelligence

SELF-PERCEPTION

Self-Regard is respecting oneself while understanding and accepting one's strengths and weaknesses. Self-Regard is often associated with feelings of inner strength and self-confidence.

Self-Actualization is the willingness to persistently try to improve oneself and engage in the pursuit of personally relevant and meaningful objectives that lead to a rich and enjoyable life.

Emotional Self-Awareness includes recognizing and understanding one's own emotions. This includes the ability to differentiate between subtleties in one's own emotions while understanding the cause of these emotions and the impact they have on one's own thoughts and actions and those of others.

STRESS MANAGEMENT

Flexibility is adapting emotions, thoughts and behaviors to unfamiliar, unpredictable, and dynamic circumstances or ideas.

Stress Tolerance involves coping with stressful or difficult situations and believing that one can manage or influence situations in a positive manner.

Optimism is an indicator of one's positive attitude and outlook on life. It involves remaining hopeful and resilient, despite occasional setbacks.

SELF-EXPRESSION

Emotional Expression is openly expressing one's feelings verbally and non-verbally.

Assertiveness involves communicating feelings, beliefs and thoughts openly, and defending personal rights and values in a socially acceptable, non-offensive, and non-destructive manner.

Independence is the ability to be self directed and free from emotional dependency on others. Decision-making, planning, and daily tasks are completed autonomously.

DECISION MAKING

Problem Solving is the ability to find solutions to problems in situations where emotions are involved. Problem solving includes the ability to understand how emotions impact decision making.

Reality Testing is the capacity to remain objective by seeing things as they really are. This capacity involves recognizing when emotions or personal bias can cause one to be less objective.

Impulse Control is the ability to resist or delay an impulse, drive or temptation to act and involves avoiding rash behaviors and decision making.

INTERPERSONAL

Interpersonal Relationships refers to the skill of developing and maintaining mutually satisfying relationships that are characterized by trust and compassion.

Empathy is recognizing, understanding, and appreciating how other people feel. Empathy involves being able to articulate your understanding of another's perspective and behaving in a way that respects others' feelings.

Social Responsibility is willingly contributing to society, to one's social groups, and generally to the welfare of others. Social Responsibility involves acting responsibly, having social consciousness, and showing concern for the greater community.

Overview of Your Results

Self-Regard

Self-Regard respecting oneself; confidence

111

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Individuals with self-regard respect themselves and accept both personal strengths and limitations while remaining satisfied and self-secure. Frederick, your result suggests that your self-regard is stronger than most people's. You know yourself and are comfortable with yourself, which generally translates into increased performance. You may have:

- a high level of respect for yourself, your talents, and your weaknesses.
- a willingness to confidently admit mistakes or unfamiliarity with a situation.

Impact at Work

Emotional Implications. Your result may mean that on an emotional level you are driven to achieve your fullest potential, have a more positive outlook on your capabilities, and are more confident in expressing yourself than those with average self-regard. The potential challenge is that you could lose touch with objective assessments of your capabilities. Draw on reality testing behaviors to maintain a healthy self-perception.

Social and Behavioral Implications. Your willingness and ability to understand and accept your strengths and weaknesses is often perceived by others as confidence. People may frequently gravitate toward you, look to you for advice, and seek your leadership. Because your strengths are confidently demonstrated, you may be given opportunities or promotions that maximize these talents, but it is also important to seek out opportunities that stretch your less developed skills as well. To avoid potential negative consequences of overly high self-regard, use empathy and an appropriate level of assertiveness to avoid appearing overconfident.

Strategies for Action

Self-Regard Profile. Seeking others' feedback on your strengths and weaknesses demonstrates a willingness to learn and gives you objective data to confirm whether your self-beliefs are in line with what others see.

- Identify those at work (colleague, manager) who know you well enough to comment on your strengths and weaknesses.
- Ask them to list your strengths and weaknesses with specific observations or examples.
- Without looking at their list, write what you believe your strengths and weaknesses are. Then compare lists. Look for disconnects and similarities between lists. Are there examples of where others didn't agree with your listed strengths?

Own up to your Weaknesses. Although challenging, openly admitting your weaknesses can help keep your Self-Regard in check with how your colleagues see you.

- Record your reaction to any mistakes or errors you make over the next few weeks. If you find yourself blaming "the system" or others for your mistakes, you might want to start openly admitting your points of weaknesses.
- Rather than placing blame, use mistakes as opportunities to show you know and accept your weaknesses and put in place strategies that manage them, rather than pretending they don't exist.

Balancing Your EI

This section compares Self-Regard with Self-Actualization, Problem Solving, and Reality Testing. The subscale that differs the most from Self-Regard is Self-Actualization. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Self-Regard(111) Self-Actualization(96)

Your Self-Regard is higher than your Self-Actualization. To balance these components, set goals at a level that is consistent with skill level. There may be an opportunity to reach higher goals, or to more fully recognize achievements when they occur. In doing so, both self-esteem and achievements are promoted.

Self-Actualization

Self-Actualization pursuit of meaning; self-improvement

96

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Self-actualization can be summed up in three words: pursuit of meaning. While this sounds quite philosophical, in the business world it means finding purpose and enjoyment in your job and performing to your fullest potential. Frederick, your result suggests that you are passionate about your work and life outside of work and take pride in setting and achieving challenging goals. Although you may believe that you can accomplish more, your result may mean that:

- you place value on training and keeping your expertise sharp.
- you appear to be working or acting with a plan in mind.
- for the most part you believe you are leading a rich and fulfilling life.
- at times you turn on “autopilot” mode, going through the motions of your job without truly striving to excel.

Impact at Work

Emotional Implications. Your success, happiness, and life satisfaction can probably be traced back to the fact that most of the time you do what you enjoy. Because you have found ways to apply your talents and strengths, you likely experience harmony knowing that your talents are being put to good use.

Social and Behavioral Implications. Your consistent drive to improve yourself, while pursuing personally relevant objectives, helps to create a fulfilling and varied life. This perpetual drive is often perceived by your colleagues as being organized, directive, deliberate, and purposeful. In addition, self-actualized individuals value the actual process of achieving their goals as much as or more than the final outcome. Therefore, you may find both short- and long-term planning, projecting, and scoping activities are likely natural processes for you.

Strategies for Action

The Small Things we Enjoy. Sometimes you just need to look at your job under a microscope to develop an even deeper passion for what you do.

- Write down some of the things you do in your job that are motivating for you. No matter how small, everything makes the list. Review this list once a week; Monday is usually a good day. Remind yourself that even the small things (like having a client compliment you on your presentation) can push you to do your very best.

Protect Your Time. Since you already know what you’re passionate about, you need to protect the time you have scheduled for these activities so they do not fall lower on your list of priorities.

- Block off time in your calendar, well in advance, for those activities you enjoy, especially if they are the vulnerable, non-work related type. Seeing an appointment in your calendar, even if it is for lunchtime yoga, will help you keep your time commitment.

Balancing Your EI

This section compares Self-Actualization with Self-Regard, Optimism, and Reality Testing. The subscale that differs the most from Self-Actualization is Self-Regard. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Self-Actualization(96)  Self-Regard(111)

Your Self-Actualization is lower than your Self-Regard. To balance these components, leverage your inner strength and confidence by participating in meaningful activities. Keep your expectations realistic to promote feelings of success. Set and evaluate goals that align with your strengths.

Emotional Self-Awareness

Emotional Self-Awareness understanding own emotions

108

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

If you have a solid understanding of what causes your emotions, it is much easier to regulate your behavior and control the impact your emotions have on those you work with. Frederick, your result indicates that you are in touch with your emotions and that you manage them in a way that is healthy for you and your relationships at work. It is likely that you:

- have a solid read of your inner self—you can describe and manage the emotions you are experiencing.
- are aware of how emotions impact team morale, collaborative relationships, and individual performance.
- still have a few emotions that make you uneasy or are difficult to fully understand.

Impact at Work

Emotional Implications. One of the implications of recognizing your emotions and their triggers is that for you, experiencing an emotion is the result of a cause-and-effect relationship. You know when and why an emotion will be triggered and you know how to use that emotion to your benefit. You are usually in tune with the physiological sensations of emotion, but there may be some emotions that continue to slip by unrecognized.

Social and Behavioral Implications. Your level of Emotional Self-Awareness indicates that more often than not, you feel comfortable expressing your understanding of your thoughts and ideas to your colleagues and, moreover, you know how your emotions can increase individual and team morale. Your colleagues likely understand your stance and value your openness when it comes to how you are feeling. There may still be some circumstances at work that cause you to be unsure of your emotions. You could benefit from a bit more investigation into what triggered your feelings in these cases, and what subsequent action needs to be taken.

Strategies for Action

Cause and Effect. Your strength in identifying a cause-and-effect relationship for your own emotions can be leveraged to predict others' emotional reactions.

- The next time you are in a meeting ask others, "How do you feel about this direction?" or "What is your gut telling you about this decision?"
- Identify the causes of your colleagues' emotions and how their emotions impact their buy-in to a decision. This will help not only to show that you care about others' feelings (empathy), but to give you the information you need to predict how colleagues will react in the future.

Leveraging Emotions. Although you understand emotions quite well, you can always work on refining your ability to adopt the right emotion at the right time. People with strong emotional self-awareness are able to bring on emotions in themselves that will help them with the task at hand.

- Experiment with different techniques and mediums to make you feel a wide range of emotions (e.g., somber, happy, angry, creative, or peaceful). Putting yourself in a slightly somber mood can help you focus on analytical tasks, while being happy will help you with brainstorming or creative tasks.

Balancing Your EI

This section compares Emotional Self-Awareness with Reality Testing, Emotional Expression, and Stress Tolerance. Achieving balance between these subscales can enhance emotional functioning.

Emotional Self-Awareness(108)

Your Emotional Self-Awareness is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Emotional Self-Awareness with other subscales may lead to further EI development and enhanced emotional and social functioning.

Emotional Expression

Emotional Expression constructive expression of emotions

103

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Individuals who effectively express emotions use words and physical expressions to convey their feelings in a way that is not hurtful to others. Frederick, your result portrays someone who is emotionally expressive, bringing your true feelings to the surface with relative ease. Sharing your emotions with others, as you do, helps you achieve your goals and builds stronger relationships with your colleagues. Consider the following characteristics of your result:

- you are comfortable expressing many emotions through words and/or facial expressions.
- you find beneficial ways to express your emotions, both positive (e.g., appreciation) and negative (e.g., anger).
- on a few occasions, you may have difficulty articulating or sharing certain emotions; the right words or expressions may elude you.

Impact at Work

Emotional Implications. Think of Emotional Expression as the action part of the emotional experience. You typically act on the emotions you experience; however, there are a few emotions or circumstances where you do not feel comfortable being open. You should strive for a more balanced expression of emotions; that way you don't appear to be more comfortable expressing one extreme (e.g., happiness) over another (e.g., sadness).

Social and Behavioral Implications. Successful relationships flow from a willingness to openly exchange thoughts and feelings. Your result suggests that not only are you capable of expressing your emotions in a meaningful way, but you are also usually eager to share these thoughts and feelings. Your relationships with your colleagues and clients have open channels for communication; you clearly express your feelings, creating an environment where others feel comfortable doing the same with you. There may be certain relationships or conditions where you feel less comfortable expressing yourself; it is important to determine where and why you hold back your true feelings.

Strategies for Action

Ask an Expert. Write down a few emotions that you have trouble expressing at work.

- Research them first. Find out what triggers these emotions in you and what prevents you from sharing them openly (e.g., "I feel offended and brushed off when my ideas are not accepted by the team. I haven't said anything because I don't want to disrupt the team's harmony").
- Find someone you know who is quite adept at expressing these emotions. Ask for his/her advice on how to clearly articulate emotion and overcome the fear of emotional expression.

Expression Check-In. Use your skills in empathy, interpersonal relationships, and emotional self-awareness to watch others' responses when you express emotions.

- The next time you express what you feel, pay more attention to how the other person is reacting. Notice their facial cues, the tone of their voice, and their body language; does it match what you would expect? For example, are they as happy as you are about your promotion, or do they appear threatened by the change?
- This check-in will help remind you that expressing your emotions is not entirely about you—it is also about taking care of others while showing them what you feel!

Balancing Your EI

This section compares Emotional Expression with Interpersonal Relationships, Assertiveness, and Empathy. The subscale that differs the most from Emotional Expression is Assertiveness. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Emotional Expression(103) vs Assertiveness(84)

Your Emotional Expression is higher than your Assertiveness. Are you more comfortable expressing thoughts and feelings than you are expressing directives? Balancing Emotional Expression and Assertiveness requires not just expressing your thoughts, but also appropriately letting people know what action you expect to see.

Assertiveness

Assertiveness communicating feelings, beliefs; non-offensive

84

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Picture a line between the words *passive* and *aggressive*. At the middle point of this line lies assertiveness, a place where you work with others by finding the right words at the right time to express your feelings and thoughts. Frederick, you have the tendency to be more toward the passive side of this line, keeping opinions and thoughts to yourself rather than sharing them openly. Some of the following characteristics may apply to you:

- you are seen as supportive (of everything) and a team player, but at the expense of standing up for your beliefs.
- you play the role of “observer” in meetings or discussions.
- you have a lot to contribute, but feel defeated when no one hears your good ideas.
- you work harder than most because you struggle to clearly articulate to others what you need.

Impact at Work

Emotional Implications. Your tendency to keep thoughts inside may lead you to feel exhausted, frustrated, or even angry that you are on your own dealing with your unvoiced opinions. You may ruminate over bad decisions made, the “crazy” plan that someone created, or that coworker who took credit for your work. It’s as if all this occurred without your approval or your input, and yet you are left wanting to say so much.

Social and Behavioral Implications. Your level of assertiveness suggests that you have a tendency to act passively and have difficulty communicating feelings, beliefs, and thoughts openly. Your lack of assertiveness may prevent you from motivating others to achieve individual and team goals, effectively dealing with conflict, and obtaining adequate resources for effective job performance. You could also be seen as lacking initiative, particularly if you are low in independence. Your great ideas may stay hidden from your team and as a result you will not be as enthusiastic or committed to others’ ideas/directions (because you have something better in mind).

Strategies for Action

Overcoming Fear. A common reason for overly passive behavior is the fear of losing something as result of speaking up.

- Identify the last three times you were passive (meetings are great places to start). Then, brainstorm all the possible positive and negative results that could have occurred had you been more assertive.
- Most of our fear comes from an exaggeration of bad consequences. Think of situations where the good consequences outweighed the bad. Identify when similar situations will be occurring in future. These will be relatively safe opportunities for you to practice being more assertive.

Have a Goal in Mind. Try setting a small goal before you go into an assertive situation. When you are clear upfront on what you want to achieve, it is easier to assert yourself.

- Leverage the skills that you would normally use to get the job done (e.g., motivation, drive, technical skills, goal setting) to set a small goal for the conversation. Tie this smaller goal to a larger performance objective so you know something bigger is at stake. For example, “I will tell my manager today that customer service errors are angering my top customers. She won’t be happy, but if I don’t speak up we may lose these key accounts.”

Balancing Your EI

This section compares Assertiveness with Interpersonal Relationships, Emotional Self-Awareness, and Empathy. The subscale that differs the most from Assertiveness is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Assertiveness(84)  **Interpersonal Relationships(111)**

Your Assertiveness is lower than your Interpersonal Relationships result. Placing greater emphasis on interpersonal relationships than on being assertive may permit you to support those you work with. Make sure you give equal emphasis to standing up for what you believe in, and speaking your mind when it is important to do so.

Independence

Independence self-directed; free from emotional dependency

81

What Your Score Means

Frederick, being independent means that you are capable of feeling, thinking, and working on your own. Your results show that you are not regularly showcasing your independence; instead, you often look to others for advice, reassurance, and direction. In your work environment, this can be particularly obvious when you need to make decisions. Although there is nothing wrong with consultation, regularly passing on the role of primary decision maker could be seen as emotional dependency. Consider the following interpretation of your results:

- you like guidance and direction from others on how to do your job.
- you prefer to defer decision making to someone else.
- you see yourself as a supportive follower, you go “with the grain”.

Impact at Work

Emotional Implications. Think of independence as the stage for showcasing your other EI abilities. If you are unable to think or act freely, you are less likely to demonstrate to your colleagues that you have other strengths in EI. You may have many great qualities, but others are unlikely to notice them.

Social and Behavioral Implications. Your score on Independence suggests that you are susceptible to the influence of your colleagues and superiors. Although you have a marked preference for working with others and making decisions in collaboration with coworkers, your reliance on these people suggests that you might be resistant or uncomfortable if required to work autonomously. In conversations or meetings, you may find yourself adopting the same emotions as others in the room or easily conforming to others' decisions. While this can give the impression of being a great team player, it is at the expense of you putting forth your own independently generated ideas.

Strategies for Action

Stop the Self-Talk. Self-talk, that voice inside your head, can both motivate you and discourage you from being independent. If your self-talk is filled with fear of making mistakes or thoughts of self-doubt, you will be unlikely to take independent action. The next time you find yourself making excuses for why you shouldn't act/decide on your own, write down arguments against each of your self-talk excuses. For example: “What if I make the wrong decision?”—“Well, I have consulted subject matter experts and completed my own research, so I am well informed. And if it is the wrong decision, then the worst that will happen is ____”.

Holding Yourself Accountable. When you need to make a decision, build in personal accountability by stating to others that you will be the primary decision maker and that you are gathering input to be well informed prior to making the decision.

- By simply stating up front that you are the final decision maker, you will be less likely to pass the buck to someone else for the final decision.
- You can still gather information and feedback prior to making the decision; just be aware that no one is going to give you the answer—you need to do that on your own.

Balancing Your EI

This section compares Independence with Problem Solving, Emotional Self-Awareness, and Interpersonal Relationships. The subscale that differs the most from Independence is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Independence(81)  **Interpersonal Relationships(111)**

Your Independence is lower than your Interpersonal Relationships result. To balance these components, recognize the importance of being a team player, without becoming overly reliant on the direction or support of others. Be collaborative, but retain the courage of your convictions.

Interpersonal Relationships

Interpersonal Relationships mutually satisfying relationships

111

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Frederick, this subscale is about developing and maintaining mutually satisfying relationships and your result shows an above-average capability to build relationships with compassion, trust, and mutual give-and-take. Your colleagues support you in getting your job done, and in turn others seek you out because of your approachable demeanor. Some characteristics of your result are:

- you have built up, or are currently building up, a useful network of colleagues and professionals.
- your relationships are authentic; you know people on a personal level.
- you feel at ease with people and look forward to engaging in social interactions.

Impact at Work

Emotional Implications. For you, relationships are an essential part of life and you are likely heavily invested in making your relationships work. One implication of this emotional investment is that you may hide emotions or shy away from making decisions that could potentially cause conflict. Particularly if you scored high in Empathy and low in Assertiveness, you should determine if you or your relationships are suffering as a result of withholding your true thoughts and emotions.

Social and Behavioral Implications. Your result suggests that you take an active role in establishing and maintaining your professional relationships at work. You are probably seen as a “connector”, aware of who does what, who knows what, and who needs to know what. Maintaining confidences, team harmony and open communication are likely top priority for you in your job. As you continue to build relationships, it is important to know the boundaries of these interactions. Failure to recognize when you begin to occupy more and more of your colleagues’ time may result in less time allocated to projects, at which point your social interactions may prove costly to job performance.

Strategies for Action

Recognition Goes a Long Way. Remember to celebrate events that are important to your coworkers, but also express recognition on a regular basis. Instances may include birthdays, promotions, or recognition for a job well done.

- Do you know what kind of recognition your coworkers prefer? Not everyone likes “Happy Birthday” sung at their desk or a reward given in front of their peers.
- Leverage empathy skills to determine what type of recognition motivates and is appreciated by each of your coworkers.

Sharing the Truth. A healthy work relationship needs to be based on open communication, without fearing that your opinion will cause irreparable damage.

- The next time you find yourself tempted to hold back your true thoughts for the sake of group happiness, pause.
- Write down what you really think or feel. Look at this statement and list all the potential positive and negative outcomes that could occur as a result of sharing your opinion.
- If the positives outweigh the negatives, rephrase what you want to say beginning with an agreement statement and ending with your true opinion.
- Bring this newly phrased statement to your discussion and be prepared to share it, starting with agreement and ending with your honest thoughts.

Balancing Your EI

This section compares Interpersonal Relationships with Self-Actualization, Problem Solving, and Independence. The subscale that differs the most from Interpersonal Relationships is Independence. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Interpersonal Relationships(111)  **Independence(81)**

Your Interpersonal Relationships result is higher than your Independence result. These components work in unison by distinguishing the times when collaboration and group work is needed from times that require independent functioning. As a general rule, when tasks can be completed independently, it may be best to do so, leaving colleagues free to work on other tasks that they may be required to do.

Empathy

Empathy understanding, appreciating how others feel

105

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Empathy, the ability to recognize, understand, and appreciate the way others feel, is a crucial EI skill at the heart of all effective work relationships. Frederick, your result indicates that you are generally an empathic person who is able to grasp what another is feeling, even if it is much different from what you feel. Your empathic nature makes you an approachable and open team member with whom coworkers feel safe sharing thoughts and ideas. With a result such as yours you may find:

- you are “tuned in” to how others are feeling.
- you care about the thoughts and feelings of others as much as you do your own.
- under times of stress or moments of defensiveness, you are likely to adopt a less empathic approach, possibly arguing your position without considering the needs of others.

Impact at Work

Emotional Implications. Your result in Empathy provides a solid foundation for all other interpersonal skill areas. You draw on your ability to respect others so that your interactions with others appear sincere. Still, certain emotions may cause your normally empathetic demeanor to crack. Anger, for example, may get the best of you, causing you to become critical instead of your typical caring and respectful self.

Social and Behavioral Implications. Generally speaking, your ability to perceive and understand other people’s emotions suggests that caring for others is built into the process of achieving your day-to-day tasks. For you, empathy is an active process that is inherent in the way you make decisions, resolve conflict, manage change, and work as a contributing team member. Often this results in others reciprocating their thoughts and emotions. Your ability to demonstrate empathy where appropriate will go a long way toward fostering your interpersonal relationships.

Strategies for Action

Be Prepared. Prior to your next meeting, prepare by:

- Listing all attendees and what needs and expectations each brings to the meeting
- Predicting how they will act during the meeting. What issues do you need to be sensitive towards?
- Generating a number of questions to further understand your colleagues’ needs during the meeting. You may not be able to resolve conflicting needs, but these engaging questions will help show your interest and compassion for others’ situations and needs.

Connecting on a Personal Level. If you know colleagues on a personal level you will better understand what impacts their emotions and be in a better position to see situations from their perspective.

- With some of your lesser known colleagues, take the time to connect with them on topics outside of their field of work (e.g., children, sports, current events, traveling).
- With the next situation that calls for empathy on your part, draw upon this background information to show your sensitivity to their needs (e.g., “You must really be feeling stressed with two sick kids at home and I know your wife is away at that conference. How can I help?”).

Balancing Your EI

This section compares Empathy with Emotional Self-Awareness, Reality Testing, and Emotional Expression. Achieving balance between these subscales can enhance emotional functioning.

Empathy(105)

Your Empathy is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Empathy with other subscales may lead to further EI development and enhanced emotional and social functioning.

Social Responsibility

Social Responsibility social consciousness; helpful

129

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Social responsibility is that moral compass directing your behavior toward promoting the greater good and contributing to society and one's social groups. Frederick, your result suggests that you are highly altruistic in your efforts, taking most, if not all, opportunities to help others. Your concern for societal issues is demonstrated through the selfless contributions you make, both at work and in your community. Based on your result, you:

- consistently demonstrate your social conscience and are compelled to help others.
- are seen as a "Good Samaritan" who helps out without expecting anything in return.
- gain fulfillment from a variety of sources, including those activities outside of work.
- may need to watch that you don't put others' needs so far ahead of yours that you fail to achieve your personal goals.

Impact at Work

Emotional Implications. You are able to keep your emotions in perspective, having observed firsthand the difficulties others are facing. Also, because you contribute to a wide variety of activities, your emotions are not tied to one source. For example, if you have a setback in one area (e.g., loss of a key client account), you can look to another area for relief (e.g., coaching basketball).

Social and Behavioral Implications. Overall, you appear to be a cooperative and constructive member of your organization who acts in support of the common good. It is not uncommon to see someone with this level of Social Responsibility involved in a variety of social and leadership pursuits both inside and outside of the workplace. A potentially problematic implication of such involvement is that you may take on too many responsibilities, regardless of the cost to the quality of your work or your personal well-being. Be mindful that you don't engage in helping others as an escape from things that need to be fixed in your own life.

Strategies for Action

The Best Intentions. Check in with yourself to ensure that you are not avoiding your current emotional state by focusing solely on helping others.

- Ask someone close to you (e.g., family or close friends) to describe what your intentions to help look like from their perspective. Others may be able to see the real motives behind even the best intentions.
- If you are overly involved to the point that your personal well-being is neglected or you are placing unrealistic expectations on your friends, family or work peers for their social or corporate involvement, it may be time to reflect on your motives behind your desire to help others.

Inspiring Initiative. Inspiring others to be socially responsible can create an overall feeling of meaning and charity in the lives of others while fueling your passion for contributing towards the greater good.

- Leverage your passion for causes you care about by reaching out to your friends and family for help.
- Brainstorm several activities that you, family and friends can engage in to help at least one of these causes.
- Identify a plan, specific roles for each person and a timeframe for these activities.

Balancing Your EI

This section compares Social Responsibility with Self-Actualization, Interpersonal Relationships, and Empathy. The subscale that differs the most from Social Responsibility is Self-Actualization. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Social Responsibility(129) ➔ **Self-Actualization(96)**

Your Social Responsibility is higher than your Self-Actualization. To balance these components requires balancing the importance of contributing to society with achieving your own personal goals. Helping others to achieve their goals is important, but ideally this should work in a reciprocal way, so that the relationship helps you to achieve your potential and aspirations as well.

Problem Solving

Problem Solving find solutions when emotions are involved

99

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Problem Solving is not about the quality of your solutions, but rather at how effectively you use your emotions in the process of solving a problem. Frederick, your result in problem solving speaks of someone who can use their emotions effectively to focus on the problem at hand. In most situations you keep a clear head on the pertinent issues, without becoming frustrated by too much information or too many options. Your result indicates:

- that you take in enough information to make informed conclusions, but not so many details that you are overwhelmed.
- you confront problems head on, rather than avoiding them.
- there are still certain types of problems where your emotions get in the way of reaching a conclusion.

Impact at Work

Emotional Implications. The emotional implication for your result is that while most of the time you tackle decisions head on, there are instances when you tend to avoid making a decision. It is important to be consistently decisive whether dealing with interpersonal conflict or performance-management issues. Decisions regarding interpersonal issues shouldn't be avoided due to their uncomfortable nature, for they can be just as toxic as technical problems.

Social and Behavioral Implications. You regularly engage in clear problem-solving strategies, even when emotions enter the picture. Although there are still times when your emotions derail your decisiveness (e.g., under stress), for the most part you make use of the information contained in your emotions rather than let those emotions cloud your judgment. Given your ability to find solutions when emotions are running high, you are likely perceived as someone who can assume leadership responsibilities where decisiveness and execution are paramount.

Strategies for Action

Watch Your Limit! Our brains typically handle seven chunks of information, whether we are memorizing or deciding between many options; seven seems to be the maximum amount of information we can effectively manage.

- The next time you are stuck in solving a problem, ensure you are dealing with no more than seven pieces of information (or deciding among fewer than seven choices). Too much information paralyzes you, while too little leaves you uninformed.
- Also, if your decision is stressful, your mental and emotional resources will be even fewer, so you may want to limit yourself to three options.

Decision Deadlines. For complex issues, including interpersonal conflicts, set a deadline by which the problem must be resolved. This deadline will help you stick to an efficient process for problem solving where you are less likely to put off dealing with a tough decision.

- Generate multiple alternatives for a problem and evaluate them on the basis of impact, costs, resources and timing.
- Set a deadline for when you will select the best single solution. Treat this like any other important deliverable and have a colleague follow up with you to ensure you've met your deadline.

Balancing Your EI

This section compares Problem Solving with Flexibility, Reality Testing, and Emotional Self-Awareness. Achieving balance between these subscales can enhance emotional functioning.

Problem Solving(99)

Your Problem Solving is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Problem Solving with other subscales may lead to further EI development and enhanced emotional and social functioning.

Reality Testing

Reality Testing objective; see things as they really are

100

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Call it “being grounded” or “tuned into the situation,” Reality Testing means seeing things for what they really are. In business, this includes accurately sizing up the environment, resources, and future trends in order to set realistic plans/goals. Frederick, your results indicate that for the most part you can look past your emotional biases and see situations objectively. You are tuned into the task at hand and your environment and as a result set fairly reasonable goals. Your result suggests:

- you are unlikely to misinterpret critical information or allow emotions to color reality.
- your decisions and objectives are based on realistic information.
- some instances of overly positive (extreme happiness) or overly negative emotions (extreme anxiety) may cause you to be less objective.

Impact at Work

Emotional Implications. Your ability to size up the immediate situation means your emotional responses to events are generally within reason and acceptable. For instance, if something minor occurs you are unlikely to blow it out of proportion. There are times, however, particularly when under stress, that you might switch your reality testing off, allowing your emotions to cloud your objectivity.

Social and Behavioral Implications. Understanding your own limitations and personal biases goes a long way toward establishing credibility with your peers. Giant possibilities are inspiring, but matching possibilities with capabilities will create the buy-in you need. Others likely seek out your evaluation of a situation, as you are able to remain objective even when emotions are heightened. At work, your actions are likely to be exactly what the situation calls for, and only under some circumstances do you over- or under-react. It is important to figure out when you misread your environment (e.g., under stress?) and how you can further put aside your biases under these circumstances.

Strategies for Action

Practical Actions. Breaking a problem or decision down into small, practical steps can help you to stay focused on the reality of the situation and not what you wish would happen.

- Practical actions are specific steps that need to be taken, resources that need to be gathered, or buy-in you need to secure in order to make a decision.
- Listing practical actions helps you to stay grounded under pressure by keeping your focus on specific tasks required to reach a bias-free decision.

Fearing the Worst, or Sugarcoating Reality? Under times of stress you may rely less on your reality testing skills and fall victim to fearing the worst-case scenario or sugarcoating reality.

- Which of these two extremes best describes you when you are not seeing things realistically?
- If you worry about catastrophe, find evidence that says a catastrophe is unlikely. Or try running your catastrophe hypothesis by a third party to see if it's plausible.
- If you sugarcoat reality, play the role of “devil’s advocate”; find data that contradicts your overly positive assessment. Also, watch others’ reactions to your positivity; if there is hesitation in their voice or body language, they likely see your positive outlook as unrealistic.

Balancing Your EI

This section compares Reality Testing with Emotional Self-Awareness, Self-Regard, and Problem Solving. The subscale that differs the most from Reality Testing is Self-Regard. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Reality Testing(100) Self-Regard(111)

Your Reality Testing is lower than your Self-Regard. When these two areas are working in harmony, your self-evaluation is based on objective information. It comes from having clear goals, and basing your self-assessment on the attainment of those goals. The best practical outcomes often come from utilizing strengths. Weaknesses can be recognized and improved upon by paying attention to feedback, and by analyzing the causes when something goes wrong.

Impulse Control

Impulse Control resist or delay impulse to act

96

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Impulse control involves understanding the appropriate times and ways to act on emotions and impulses, and the importance of thinking before acting. Frederick, your result shows someone who is generally able to resist or delay impulses to act. Your stable nature helps to put people at ease; coworkers will feel that they can predict your behavior and will open communication channels with you. Your result may indicate a tendency to:

- be deliberate and apt to survey a situation before responding.
- control your emotions and impulses to act.
- be considerate of sharing “airspace”, ensuring everyone has a chance to speak.
- be somewhat impulsive under times of stress or pressure.

Impact at Work

Emotional Implications. Your emotions are usually expected visitors: you experience them, learn from them, and then take action based on this emotional knowledge. This deliberate experience of emotions prevents you from acting erratically when an emotion presents itself.

Social and Behavioral Implications. Your ability to remain focused, delay temptation, and generally avoid making rash decisions has tremendous interpersonal and professional implications. Leadership requires flexibility, but it is an astute focus and deliberate planning that results in corporate buy-in. You are likely respected for your ability to stay the course and think before you act. There is still room to improve your impulsivity, particularly in times of stress or extreme temptation. In such instances you may find it hard to resist impulses to act which may lead to rash decisions or behavior you later regret.

Strategies for Action

Impulse Inventory. There is still room for you to grow your understanding of what types of situations cause you to be impulsive.

- Conduct an inventory of what makes you impatient or impulsive. Think of the last couple of weeks of work—what reactions did you have that you wish you could take back?
- Write a list of what triggered these regrettable moments (e.g., stress, being caught off guard, team conflict). Being aware of specific triggers will help you plan to avoid them or practice your emotional response before they happen.

Learning from Regret. Rewriting a situation where you acted impulsively can help you see the positive effects of deliberate, contemplative action.

- For a situation or decision where you acted rashly, try to identify the emotion you were experiencing at the time. Was it frustration, anger, hopelessness?
- If you could rewrite the situation, what would you have done differently? How could you have exercised more control?
- Use this example of how you wished you had behaved as a goal. Try to demonstrate this behavior in the next two weeks, and make note of any positive effects your more controlled behavior had on yourself and those around you.

Balancing Your EI

This section compares Impulse Control with Flexibility, Stress Tolerance, and Assertiveness. The subscale that differs the most from Impulse Control is Assertiveness. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Impulse Control(96) ➔ **Assertiveness(84)**

Your Impulse Control is higher than your Assertiveness. These components work best together when assertiveness is tempered by good impulse control, resulting in communication that is both forthright and respectful. This means taking the time to consider the impact of your actions, and then proceeding with confidence in an appropriately assertive manner that reflects the most significant aspects of a situation.

Flexibility

Flexibility adapting emotions, thoughts and behaviors

90

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Flexibility requires that you be able to modify your thoughts, emotions, and behaviors in response to change. Frederick, you appear to be accepting of change and shifting priorities in your workplace. You embrace learning new things and remain open to others' opinions and new ways of thinking and doing things. While you likely value progress and innovation, there are some situations where you stick to your tried and true methods, preferring predictability over spontaneity. Some indicators of your result are:

- a willingness to respond to changes in the workplace (e.g., structural changes, new technology, evolving market needs).
- an inclination to enjoy change and find it refreshing.
- hesitation to change at times, most likely when you are under stress or feeling anxious.

Impact at Work

Emotional Implications. Your Flexibility suggests that although you frequently adapt your thoughts, emotions, and actions, there are still times when your emotions prevent you from accepting change. For many businesspeople, being a specialist in one's profession is a lifetime pursuit, but keep in mind that it also creates an inherent rigidity. Your emotional attachment to "your ways" can prevent you from adapting to changes in the business.

Social and Behavioral Implications. Your result suggests you can tolerate change and may even thrive when change is required. Your tolerance for change is likely welcomed by your organization and is a desirable skill in today's fast-paced and progressive culture. You may be seen as a champion of change, promoting the benefits of adjustment, and garnering buy-in from your peers. While there are some moments where you prefer sticking with the status quo, this is something that could be easily improved upon in your case.

Strategies for Action

The Plastic Brain. Research suggests that our brains have a lifelong plasticity, that even in adulthood we can learn complex things. Why then has it been so long since we attempted to learn something completely new?

- The key is to move outside of your area of expertise and begin to learn something entirely new (e.g., learn a new language, take fencing or cooking lessons, learn to grow an organic garden) and accept the arduous practice and mistakes that come with taking on a new skill. (Remember learning how to ride a bike?)
- Once you start attaching positive emotions to the small successes you experience in this new area, you will find yourself becoming even more accepting of change in other areas of your life.

Ask for Help. When you find yourself being resistant to change, take some time out to solicit the opinions of trusted coworkers and embrace their views on a particular problem and how they would approach it. Particularly under stress, you may find yourself going down the same road you always travel, but if you take the time try out even one new strategy or technique, you will broaden your skill base and enhance your ability to cope with change.

Balancing Your EI

This section compares Flexibility with Problem Solving, Independence, and Impulse Control. Achieving balance between these subscales can enhance emotional functioning.

Flexibility(90)

Your Flexibility is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Flexibility with other subscales may lead to further EI development and enhanced emotional and social functioning.

Stress Tolerance

Stress Tolerance coping with stressful situations

104

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Stress Tolerance is the ability to cope with and respond effectively to stress and mounting pressure. Frederick, your result indicates that you are armed to withstand stress with a repertoire of effective coping strategies. You are able to manage your emotions, remain composed, and maintain your performance, even when times get rough. Although you may not handle all stressful conditions well, you have the underlying belief that you can control your reaction to stress. Some characteristics of your result are:

- you can maintain a level of work performance even under mounting pressure or competition.
- you actively cope with stress without letting your emotions take over.
- weaknesses in other areas of EI may be more apparent during times of stress.

Impact at Work

Emotional Implications. Although you can keep control of your emotions during times of stress, there is the possibility that you do not leverage and use your emotions. Rather than subduing your emotions, remember to use them. The emotion of happiness can help you come up with creative solutions to your stressful situation.

Social and Behavioral Implications. Your ability to tolerate stress and exert some influence over the situation is likely to appear calming and even inspiring to your colleagues. Your ability to openly cope with your challenges and even bring others along with you is a sign of tenacious leadership, a quality that is imperative given the full schedules we all work with. Although mounting pressure can cause you to lose your composure, for the most part others can predict your calm and focused demeanor and as a result are likely to openly share information with you.

Strategies for Action

Building your Coping Strategies Bank. There are several effective behavioral strategies that can help you better cope with daily stressors and improve your overall stress tolerance. Some of these strategies are so discreet you can use them in the office to address stress as soon as it starts:

- deep breathing, belly breathing, visualization exercises
- progressive muscle relaxation, acupressure
- yoga, tai chi, meditation

Worry-Free Zone. Declare a worry-free zone somewhere in your workplace.

- Move away from your desk and spend five minutes in a different location (e.g., cafeteria, outside) where the only rule is: No thinking about the thing that is causing you stress.
- Allow your mind to cool down and to become clear again. Only then are you in the best position to leverage your emotions in order to respond appropriately to the stress.

Balancing Your EI

This section compares Stress Tolerance with Problem Solving, Flexibility, and Interpersonal Relationships. The subscale that differs the most from Stress Tolerance is Flexibility. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Stress Tolerance(104)  Flexibility(90)

Your Stress Tolerance is higher than your Flexibility. Balancing these aspects of EI involves using coping mechanisms to deal with stressful situations while they are occurring. It also means changing tactics if the stressful situation has not been overcome. Waiting out stressful events may work but is not typically the best strategy. To facilitate a more active approach to dealing with stress, identify one small thing that could be changed about the stressful situation and push to change it. However, even the most stress tolerant people need to adjust to their surroundings to avoid burnout.

Optimism

Optimism positive attitude and outlook on life

105

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Optimism, the ability to remain positive despite setbacks, often differentiates between “star performers” and others in the workplace. It permeates almost every application of EI, from helping you persevere to enabling you to view change as a good thing. Frederick, your result shows a person who is normally optimistic, preferring to see the world in a positive light. A result in the average range also indicates that you are not so overly optimistic that you are blind or naïve to the realities of life. Some characteristics of your result are:

- you tend to see the world with a “glass half-full” approach.
- you are hopeful about the future.
- you are energized by setbacks and obstacles, fuelled to overcome challenges in life.

Impact at Work

Emotional Implications. Optimistic people experience a range of emotions. You are not so optimistic that you ignore fear, nor are you so pessimistic that you ignore happiness. To your team, this grounded optimism is likely contagious; others will see your hopeful vision of the future, and with realistic plans they will see that this vision is attainable.

Social and Behavioral Implications. Hopefulness and resilience are attributes of effective leaders. You are likely able to see opportunities and possibilities that others may overlook or simply reject for being too difficult, too time-consuming, or outside of the organization’s current comfort level. Your goals (and if applicable, the goals you set for others) are likely to reflect your optimistic approach to work; you see the possibilities and set stretch targets that help you strive for the best. There is still room to increase your level of optimism, as certain instances at work likely cause you to be more negative than you wish to be.

Strategies for Action

Pessimistic Moments. If there are times when you feel less optimistic, take note of when these occur.

- Identify the trigger for your pessimism. Is it when timelines are tight? Are you in a leadership role and skeptical of others’ capabilities?
- Debate the validity of this pessimism. Look to the past to confirm whether similar successful or unsuccessful situations have occurred.
- If your pessimism is warranted, perhaps contingency plans for this risk should be considered.

Reevaluate. When you are faced with a challenge and your normally optimistic demeanor wavers, you may need to reevaluate your goals in order to visualize a successful outcome.

- Adjust your tasks and goals into more manageable and attainable segments. For larger, more daunting projects, try to break them into five to seven smaller steps.
- This does not mean that you should oversimplify or trivialize what is needed, but it does help to become more solution-focused at smaller intervals than to be burdened by a single overwhelming goal.
- For each smaller step, describe what you visualize success to be. Keep focused on these smaller outcomes to help bring your optimism back in line.

Balancing Your EI

This section compares Optimism with Self-Regard, Interpersonal Relationships, and Reality Testing. Achieving balance between these subscales can enhance emotional functioning.

Optimism(105)

Your Optimism is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Optimism with other subscales may lead to further EI development and enhanced emotional and social functioning.

Well-Being Indicator

Happiness satisfied with life; content

116

How to Use this Page

Happiness includes feelings of satisfaction, contentment and the ability to enjoy the many aspects of one's life. It is different than the other EI abilities in that Happiness both contributes to, and is a product of, emotional intelligence. As such, your result in Happiness is like an indicator of your emotional health and well-being.

Your Happiness result is shown below, linked to your results on the four subscales most often associated with Happiness.

Because Happiness is so interconnected with all EI abilities, you may find further development opportunities if you explore how the remaining subscales contribute to your level of Happiness, and vice versa.

Happiness

Frederick, your result in Happiness suggests that you almost always maintain a happy disposition towards all aspects of your life. You enjoy the company of others and are likely on a positive life course. Your happiness is seen and experienced as infectious. Your result in Happiness is high, as are your results across the four subscales most connected with Happiness. You may want to look into your lower results on other subscales (Assertiveness and Independence) to identify ways your Happiness can bolster these areas. Your result indicates that you may:

- exclude cheerfulness at both work and play while participating in activities you truly enjoy.
- be seen by coworkers as motivating and resilient in the face of obstacles.

Self-Regard (111)

Happiness is a by-product of believing in oneself and living according to your own values and standards. Your high level of Self-Regard helps to promote positive feelings about oneself, confidence, and enhanced life satisfaction and happiness.

- If you could improve one facet of your life, what would it be? Why?
- Aside from material things, what is it about you that makes you truly happy?

Optimism (105)

In the face of setback and disappointment, the ability to recover and claim a happy state is contingent on one's level of optimism. Your results suggest you are optimistic and hopeful most of the time, but perhaps you could use this outlook more frequently so that your happiness becomes even more personal, permanent and justifiable.

- When are you the least optimistic? How could your outlook be improved in these situations?
- When faced with a new challenge, how do you typically feel? List your emotions and think about why you feel this way.

Interpersonal Relationships (111)

Your Interpersonal Relationships result indicates that you have well-developed relationships that likely help shield you from the negative effects of life's daily demands. If maintained, these relationships can enhance and sustain pervasive feelings of happiness.

- Are there times when you struggle with your relationships? If so, what causes the struggle and how do you remedy conflict and miscommunication?
- Do you have a mentor? Do you act as a mentor to someone else?

Self-Actualization (96)

Happiness comes from a willingness to learn and grow on a journey aligned with your values. Your result suggests a good level of self-actualization, but further development in this area will help to promote feelings of achievement and overall happiness.

- Identify what you value most in life. Are you spending enough time on the activities most important to you?
- What legacy will you leave behind?

Action Plan

The steps you take towards achieving your EI goals will determine whether or not success is realized. Use this step-by-step activity plan to help guide you closer to your goals. Remember to use the **SMART** goal setting criteria for each goal.

SPECIFIC
MEASURABLE
ACTION-ORIENTED
REALISTIC
TIMELY

Write down up to three EI skills or behaviors that you would like to further develop (e.g., "reflective listening" to build empathy, or "recognizing how my body reacts to stress" to raise emotional self-awareness). The SMART goals that you outline in the template should help to strengthen these EI skills and behaviors.

- 1.
- 2.
- 3.

Write down up to three overall qualities that you would like to have (e.g., integrity, providing clear leadership, team player, clear communicator). In some way the goals you outline in this action plan should help you achieve the overall qualities you identified.

- 1.
- 2.
- 3.

Transfer your SMART goals into the action plan template below.

SMART Goal	Time Frame	Benefits	Measure of Success	Support and Resources Needed	Potential Barriers
Listen to others	In team meetings Starting from today	Other people will listen to me I will get to hear everyone's views	Feedback from the team to say that I am listening to them more Take actions that other people have suggested	From the team to give me honest feedback	Time – often do not have time to listen to views but just need to give instructions. If this is the case need to tell people at the beginning of the meeting

I commit to this action plan _____ .
 (signature)

EI Development Commitment

A Development Commitment is a tool to help hold you accountable for accomplishing the goals outlined in your action plan. As we all too often know, our plans for personal growth and development often fall by the wayside when we get engrossed in work and our

organization's demands win the competition for our time and attention. By outlining your objectives here and leaving a copy with your coach you are increasingly more accountable to reach your personal goals.

My Personal Development Goals

My action plan includes the following goals:

Due Date

1.

2.

3.

4.

Your Signature _____
